## **1. Requirements Document**

### **1.1 Problem**

Tic-Tac-toe is a simple strategy game, where the aim is to place 3 'X' or 3 'O' vertically, horizontally or diagonally in a row. Once a player enters an 'X' or 'O', other player can place his/her mark on the empty tile and first person to get consecutive 'X' or 'O' in a row wins. The game is developed in Java platform using SWING framework and Android for mobile version of the game. The game should allow two players or a player and a computer player to play the game. The game offers different difficulty levels (beginners, intermediate and advanced) to choose from. The game algorithm should be such that when the advanced level is chosen, it becomes very difficult for the human player to beat the computer player.

The game has three version where first version just includes a board that allows user to click 'X' or 'O' on the board. The second version is the complete game with a human player and is the mobile application. And the third version is the desktop version of the second. The game board includes help, reset and exit button to allow user to perform these functions. The game also stores the scores of players which can be viewed on score board. To implement this we will be using the array list to store the scores obtained by each player. The reason behind using array list is to enable flexible portability of the code for desktop version to mobile version.

### **1.2 Background information**

Tic -Tac-Toe is an ancient strategy game whose rules are quite simple. A two player game, that allows players to place an 'X' or 'O' on the board to play the game. The goal of the game is to get 3 consecutive 'Xs' or 'Os' in a row. The first one to achieve this wins the game.

Despite of its simplicity, Tic-Tac-Toe game is tricky due to number of possible moves and number of possible positions. The player has to make the best move each time to increase its chance of winning. If none of the player succeed in getting 'X' or 'O' in a row the game is a tie.

## 2. Deliverable 1

### 2.1 Functional Requirements

ID	Feature	Priority(Critical, Important, Useful)
F1	Players can start a game by clicking the game icon.	Critical
F2	System asks player to choose 'X' or 'O' to display on the game board.	Critical
F3	Players can click the board to place 'X' or 'O' on the board.	Critical
F4	Players can click the help button for instructions.	Important
F5	System can display the game rules.	Important
F6	Player can exit the game.	Critical
F7	System can show pop-up to confirm exit.	Important
F8	Player can click the reset button to reset the game.	Critical

### 2.2 Non-functional requirements

#### Platform requirements

- IDE: Eclipse with ADT v23.2.1(Android Development Kit)
- Windows operating system

#### Process requirements

Release of PC version by Friday May 20 at 6 pm

#### Response time Process requirements

The maximum response time between click and reaction must be 16ms

#### Memory usage

The amount of memory occupied by the application should be between 128 to 512 MB.  
Observations done from the performance log during testing.

#### Reliability

The probability of failure-free software operation is 99%

#### Availability

The Systems must achieve 99.999% availability

## Allowances for maintainability and enhancement

- Good Code Quality
- Less Source Code Defects
- Less Technical Complexity
- Excellent Documentation
- Less Dead Code

## Allowances for reusability

- Modules have low module complexity.
- Modules have good documentation (a high number of non-blank comment lines).
- Modules have few external dependencies (low fan-in and fan-out, few input and output parameters).
- Modules have proven reliability (thorough testing and low error rates).

## 2.3 Use Case Diagram

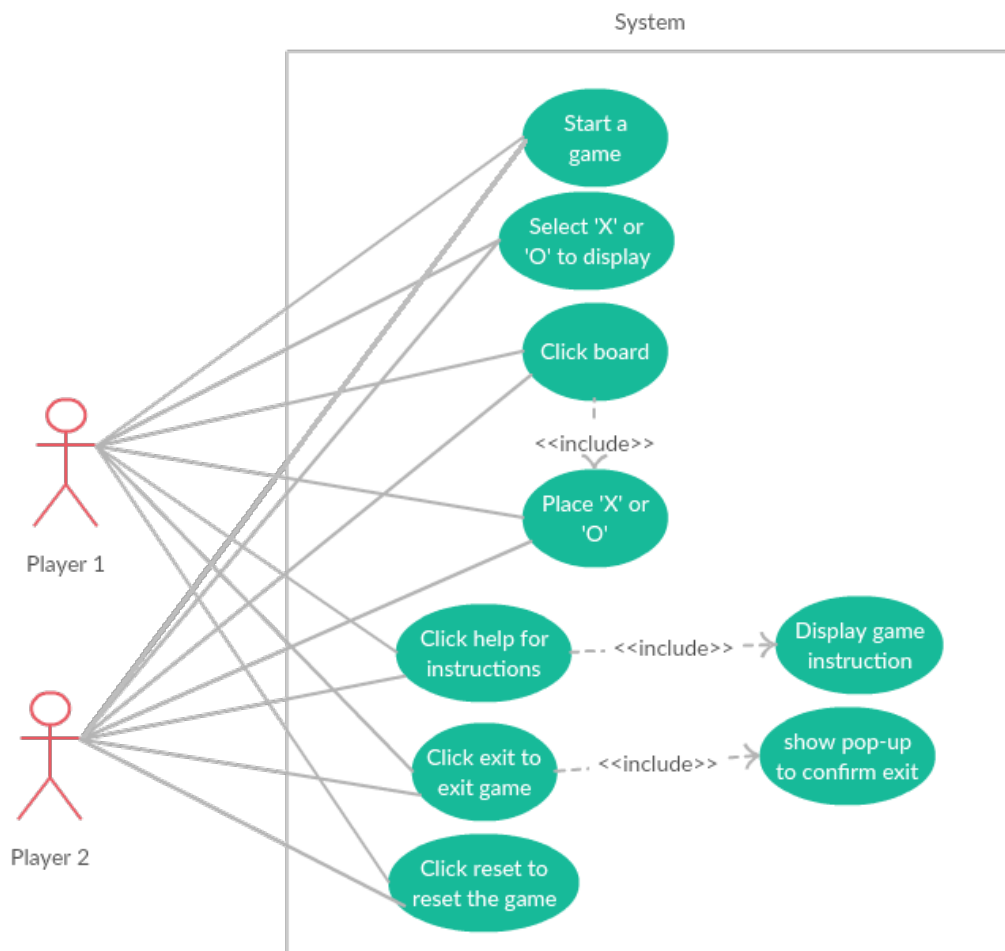

Figure 1. Use case for Deliverable 1

## 2.4 Use Case Scenario

### Start a Game

Identifier	Explanation
<b>Use Case ID</b>	UID-001
<b>Use case name</b>	Start a Game
<b>Description</b>	The players are allowed to click the icon to start the game.
<b>Primary Actor</b>	Player 1 and Player 2
<b>Priority</b>	Critical
<b>Pre-conditions</b>	N/A, Due to Start a Game is the very beginning step, there is no pre-condition.
<b>Basic Flow</b>	1. Player 1 and Player 2 can click the game icon to start the game
<b>Post-condition</b>	The screen-board is displayed and the player 1 and Player 2 are allowed to select 'X' or "O" to display.
<b>Alternate-flow</b>	N/A

### Select 'X' or "O" to display

Identifier	Explanation
<b>Use Case ID</b>	UID-002
<b>Use case name</b>	Select 'X' or "O" to display
<b>Description</b>	The players are allowed to select 'X' or "O" to display which will be stored and displayed on the score-board.
<b>Primary Actor</b>	Player 1 and Player 2
<b>Priority</b>	Critical
<b>Pre-conditions</b>	Any player must have started the game.
<b>Basic Flow</b>	<ol style="list-style-type: none"> <li>1. System asks player to select 'X' or "O" to display.</li> <li>2. Player 1 select 'X' or 'O'.</li> <li>3. Player 2 select 'O' or 'X'.</li> </ol>

<b>Post-condition</b>	Both of the players will select their own 'X' or 'O' and system will store both of their selection and display.
<b>Alternate-flow</b>	1 a. If player is unable to start the game, the system should inform player about the faulty condition. 3a and 4a. If players cannot select their own 'X' or 'O', system should by default show player 1 and player 2 instead of own 'X' or 'O'.

### Click help for instructions

<b>Identifier</b>	Explanation
<b>Use Case ID</b>	UID-003
<b>Use case name</b>	Click help for instructions
<b>Description</b>	The players are allowed to click help button for instructions.
<b>Primary Actor</b>	Player 1 and Player 2
<b>Priority</b>	Critical
<b>Pre-conditions</b>	Any player must have started the game and the help button is displayed on the screen-board
<b>Basic Flow</b>	1. Either the player 1 or player 2 to show the game instruction.
<b>Post-condition</b>	The game instruction is displayed n the screen.
<b>Alternate-flow</b>	1 a. If player is unable to click the help button, the system should inform player about the faulty condition.

## 3. Deliverable 2

### 3.1 Functional Requirements

ID	Feature	Priority(Critical, Important, Useful)
F1	Players can start a game	Critical
F2	Players can enter their name.	Critical
F3	The system can display players' name.	Critical
F4	The players can choose a level of game play (Beginners, Intermediate or Advance).	Useful

<b>F5</b>	System asks player to choose 'X' or 'O' to display on the game board.	Critical
<b>F6</b>	System can displays whose turn it is by showing player's name on the board.	Useful
<b>F7</b>	The players can click on the board to place 'X' or 'O'.	Critical
<b>F8</b>	The system marks tile with an 'X' or 'O' once the player clicks on it.	Critical
<b>F9</b>	System will check after each click if any player is winning.	Critical
<b>F10</b>	The system freezes the board if any player wins.	Critical
<b>F11</b>	A player can detect its opponent's move to beat him/her.	Critical
<b>F12</b>	The players can view scores by clicking on the score-board.	Useful
<b>F13</b>	System can display the number of times a player has won.	Useful

## 3.2 Non-functional requirements

### Platform requirements

- Platform: Android OS
- IDE: Eclipse with ADT v23.2.1(Android Development Kit)
- Android XML
- Android 5.0.1(API 21)

### Process requirements

Release of Release of Mobile version by Friday May 27 at 6 pm

### Response time

The maximum response time between click and reaction must be 10ms

### Memory usage

The amount of memory occupied by the application should be between 128 to 512 MB.  
Observations done from the performance log during testing.

### Reliability

The probability of failure-free software operation is 99%

**Availability**

The Systems must achieve 99.999% availability

**Allowances for maintainability and enhancement**

- Good Code Quality
- Less Source Code Defects
- Less Technical Complexity
- Excellent Documentation
- Less Dead Code

**Allowances for reusability**

- Modules have low module complexity.
- Modules have good documentation (a high number of non-blank comment lines).
- Modules have few external dependencies (low fan-in and fan-out, few input and output parameters).
- Modules have proven reliability (thorough testing and low error rates).

### 3.3 Use Case Diagram

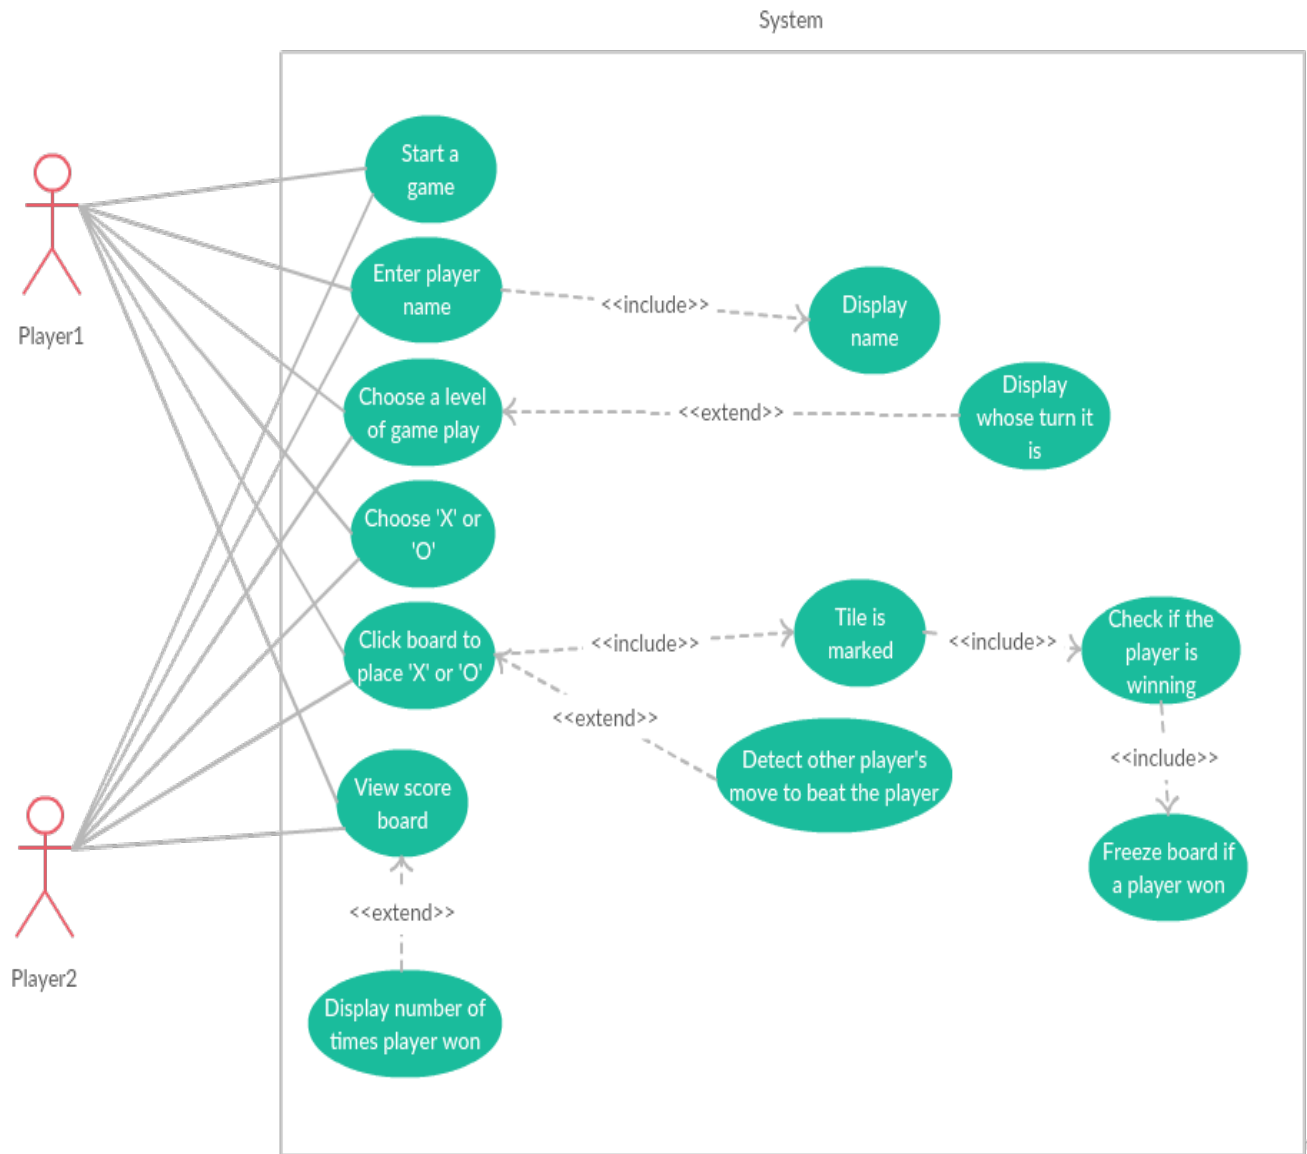

Figure 2. Use case for Deliverable 2

### 3.4 Use Case Scenario

#### Enter Player Name

Identifier	Explanation
<b>Use Case ID</b>	UID-001
<b>Use case name</b>	Enter player name

<b>Description</b>	The players are allowed to specify their names which will be stored and displayed on the score-board.
<b>Primary Actor</b>	Player 1 and Player 2
<b>Priority</b>	Critical
<b>Pre-conditions</b>	Any player must have started the game.
<b>Basic Flow</b>	<ol style="list-style-type: none"> <li>1. Any player starts a game</li> <li>2. System asks player to enter their name.</li> <li>3. Player 1 enters the name.</li> <li>4. Player 2 enters the name.</li> </ol>
<b>Post-condition</b>	Both the players name will be stored and displayed.
<b>Alternate-flow</b>	<p>1 a. If player is unable to start the game, the system should inform player about the faulty condition.</p> <p>3a and 4a. If players cannot enter their name, system should by default show player 1 and player 2 instead of their names.</p>

### View Score-board

Identifier	Explanation
<b>Use Case ID</b>	UID-002
<b>Use case name</b>	View score-board
<b>Description</b>	The players are allowed to view the score-board to see score of any players.
<b>Primary Actor</b>	Player 1 and Player 2
<b>Priority</b>	Critical
<b>Pre-conditions</b>	Any player must have started the game.
<b>Basic Flow</b>	<ol style="list-style-type: none"> <li>1. Player starts the game.</li> <li>2. Player clicks the view score-board button.</li> </ol>
<b>Post-condition</b>	System displays the scores of all the players.
<b>Alternate-flow</b>	<p>1 a. If player is unable to start the game, the system should inform player about the faulty condition.</p> <p>2a. If system cannot display the scores of the players, the system must provide an appropriate message to the user.</p>

### Choose the level of game play

Identifier	Explanation
<b>Use Case ID</b>	UID-003
<b>Use case name</b>	Choose the level of game play
<b>Description</b>	The players are allowed to choose the level of game that we wants to play.
<b>Primary Actor</b>	Player 1 and Player 2
<b>Priority</b>	Critical
<b>Pre-conditions</b>	Any player must have started the game.
<b>Basic Flow</b>	<ol style="list-style-type: none"> <li>1. Player starts the game.</li> <li>2. Both players enter their names.</li> <li>3. Player can select the level of game (beginners, intermediate and advanced)</li> </ol>
<b>Post-condition</b>	Based on the level chosen, the game will open up.
<b>Alternate-flow</b>	3 a.If the player is unable to choose the level, or skips that step, the system will by default take beginner's level.

## 4. Deliverable 3

### 4.1 Functional Requirements

ID	Feature	Priority(Critical, Important, Useful)
<b>F1</b>	Players can start a game.	Critical
<b>F2</b>	System will start playing the background music.	Important
<b>F3</b>	Player can enter his/her name.	Critical
<b>F4</b>	The system can display the player's name	Critical
<b>F5</b>	System offers different game levels for the user to choose from.	Useful
<b>F6</b>	User can select his opponent (computer or human).	Critical
<b>F7</b>	User is able to choose between X or O to play with.	Critical
<b>F8</b>	If player selects computer as his opponent, then computer can join the game as a player.	Critical

<b>F9</b>	Player can click on the board to place an 'X' or 'O' and play the game	Critical
<b>F10</b>	The system will start the timer on the player's move	Important
<b>F11</b>	The system marks tile with an 'X' or 'O' once the player clicks on it.	Critical
<b>F12</b>	System will check after each click if any player is winning.	Critical
<b>F13</b>	The system freezes the board if any player wins.	Critical
<b>F14</b>	System will issue a gift to the player on winning.	Important
<b>F15</b>	The computer payer can place 'X' or 'O'.	Critical
<b>F16</b>	The computer player can detect player's move to make the best move.	Critical
<b>F17</b>	The player can click the help button for instructions.	Important
<b>F18</b>	The system can display the game instructions.	Important
<b>F19</b>	The player can click the exit button to exit the game.	Critical
<b>F20</b>	The system can show pop-up to confirm the exit.	Important

## 4.2 Non-functional requirements

### Platform requirements

- IDE: Eclipse with ADT v23.2.1(Android Development Kit)
- Windows operating system

### Process requirements

Release of Release of AI version by Friday June 3 at 6 pm

### Response time

The maximum response time between click and reaction must be 6ms

### Memory usage

The amount of memory occupied by the application should be between 128 to 512 MB.  
Observations done from the performance log during testing.

### Reliability

---

The probability of failure-free software operation is 99%

**Availability**

The Systems must achieve 99.999% availability

**Allowances for maintainability and enhancement**

- Good Code Quality
- Less Source Code Defects
- Less Technical Complexity
- Excellent Documentation
- Less Dead Code

**Allowances for reusability**

- Modules have low module complexity.
- Modules have good documentation (a high number of non-blank comment lines).
- Modules have few external dependencies (low fan-in and fan-out, few input and output parameters).
- Modules have proven reliability (thorough testing and low error rates).

### 4.3 Use Case Diagram

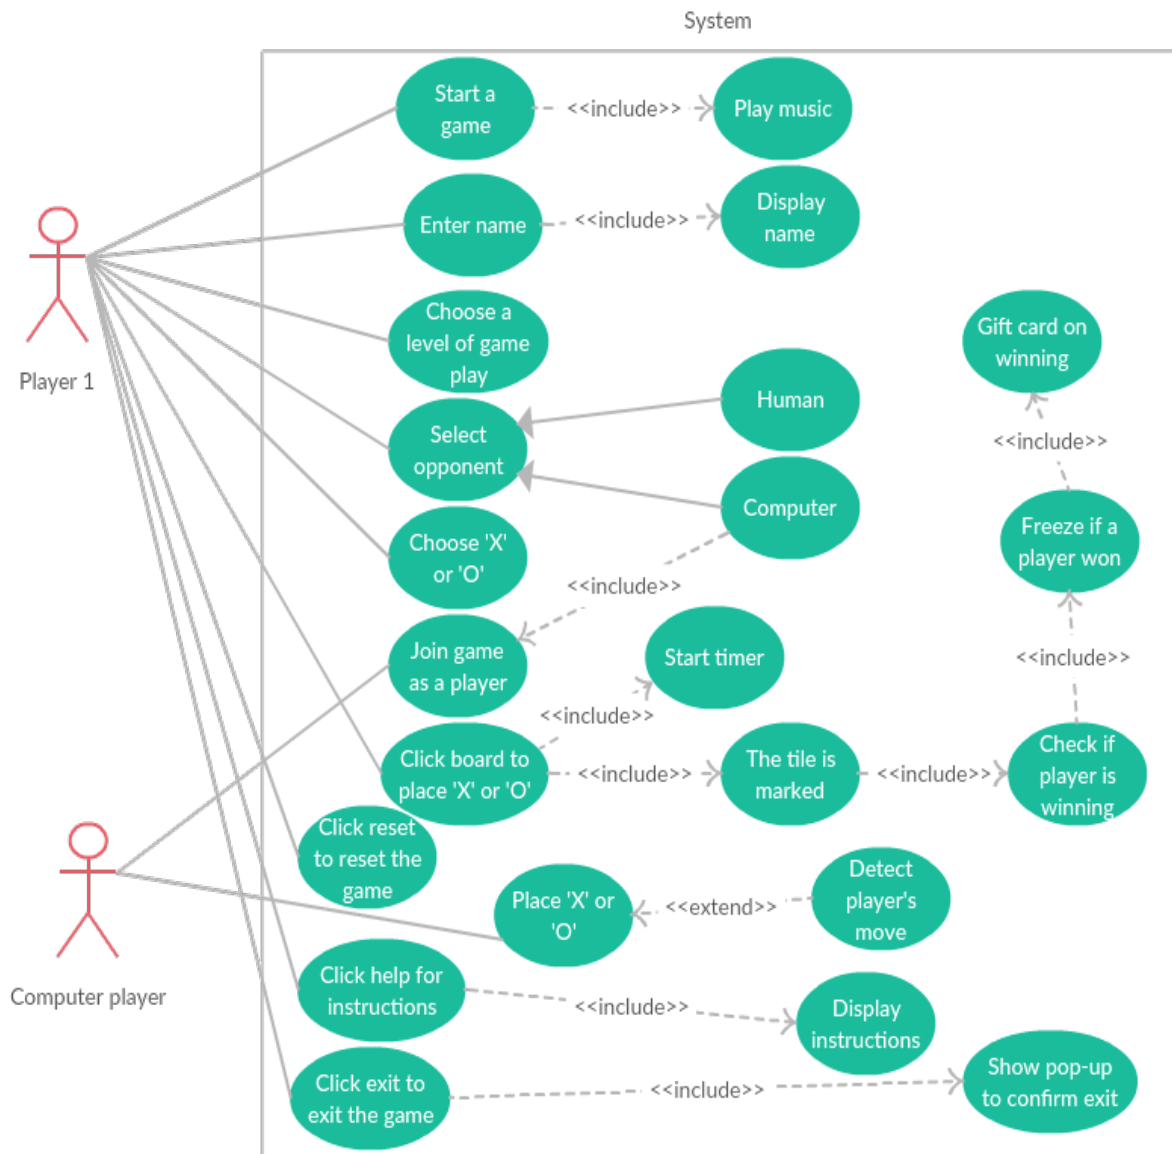

Figure 3. Use case for Deliverable 3

### 4.4 Use Case Scenario

#### Select Opponent

Identifier	Explanation
<b>Use Case ID</b>	UID-001
<b>Use case name</b>	Select opponent

<b>Description</b>	The players have the option to select their opponent (e.g. human player or computer).
<b>Primary Actor</b>	Player 1
<b>Priority</b>	Critical
<b>Pre-conditions</b>	<ol style="list-style-type: none"> <li>1. Players have started the game.</li> <li>2. Opponent option is available.</li> </ol>
<b>Basic Flow</b>	<ol style="list-style-type: none"> <li>1. Any player starts a game</li> <li>2. System asks the player to choose their opponent.</li> <li>3. The player can either click the “human player” button or “computer” button.</li> </ol>
<b>Post-condition</b>	The player can start the game with the opponent which he/she has chosen.
<b>Alternate-flow</b>	<ol style="list-style-type: none"> <li>1. If the player trying to click both options which are human player and computer, the system should jump out a warning window.</li> </ol>

### Reset game

Identifier	Explanation
<b>Use Case ID</b>	UID-002
<b>Use case name</b>	Reset game
<b>Description</b>	The players have the option to reset the game
<b>Primary Actor</b>	Player
<b>Priority</b>	Critical
<b>Pre-conditions</b>	<ol style="list-style-type: none"> <li>1. The gaming is running.</li> <li>2. The player clicks the “reset” button.</li> </ol>
<b>Basic Flow</b>	<ol style="list-style-type: none"> <li>1. Players are playing the game.</li> <li>2. Once the player wants to reset the game, he/she clicks the reset button.</li> </ol>
<b>Post-condition</b>	The game board has been resetting after the player clicks the “reset” button.
<b>Alternate-flow</b>	2a. If the reset button is not functional, then system should show some appropriate message.

### Join game

Identifier	Explanation
<b>Use Case ID</b>	UID-003
<b>Use case name</b>	Join game
<b>Description</b>	The computer player can join the game after the human player finishes the selection of the opponent.
<b>Primary Actor</b>	Computer player.
<b>Priority</b>	Critical
<b>Pre-conditions</b>	<ol style="list-style-type: none"> <li>1. The human player has finished the selection of the opponent.</li> <li>2. The option must be computer player.</li> </ol>
<b>Basic Flow</b>	<ol style="list-style-type: none"> <li>1. The human player decided to play with computer opponent.</li> <li>2. The human player clicks the button.</li> <li>3. The computer players join the game.</li> </ol>
<b>Post-condition</b>	The computer player can successfully join the game.
<b>Alternate-flow</b>	The computer player cannot enter the game if human player does not make their option.

### Exit game

Identifier	Explanation
<b>Use Case ID</b>	UID-004
<b>Use case name</b>	Exit game
<b>Description</b>	The player can exit the game whenever he/she wants.
<b>Primary Actor</b>	Player.
<b>Priority</b>	Critical
<b>Pre-conditions</b>	<ol style="list-style-type: none"> <li>1. The player is playing the game.</li> <li>2. The “exit” button works well.</li> </ol>

<b>Basic Flow</b>	<ol style="list-style-type: none"><li>1. The player decides to exit the game.</li><li>2. Click the “exit” button.</li><li>3. Player successfully exit the game</li></ol>
<b>Post-condition</b>	The player can successfully exit the game.
<b>Alternate-flow</b>	2a. If the exit button is not functional, then system should show some appropriate message.
